

## To Enable Macros in Excel 2007

1. Open Excel 2007 and click the **Office** button in the upper left corner of the screen. At the bottom of this menu, click the **Excel Options** button.

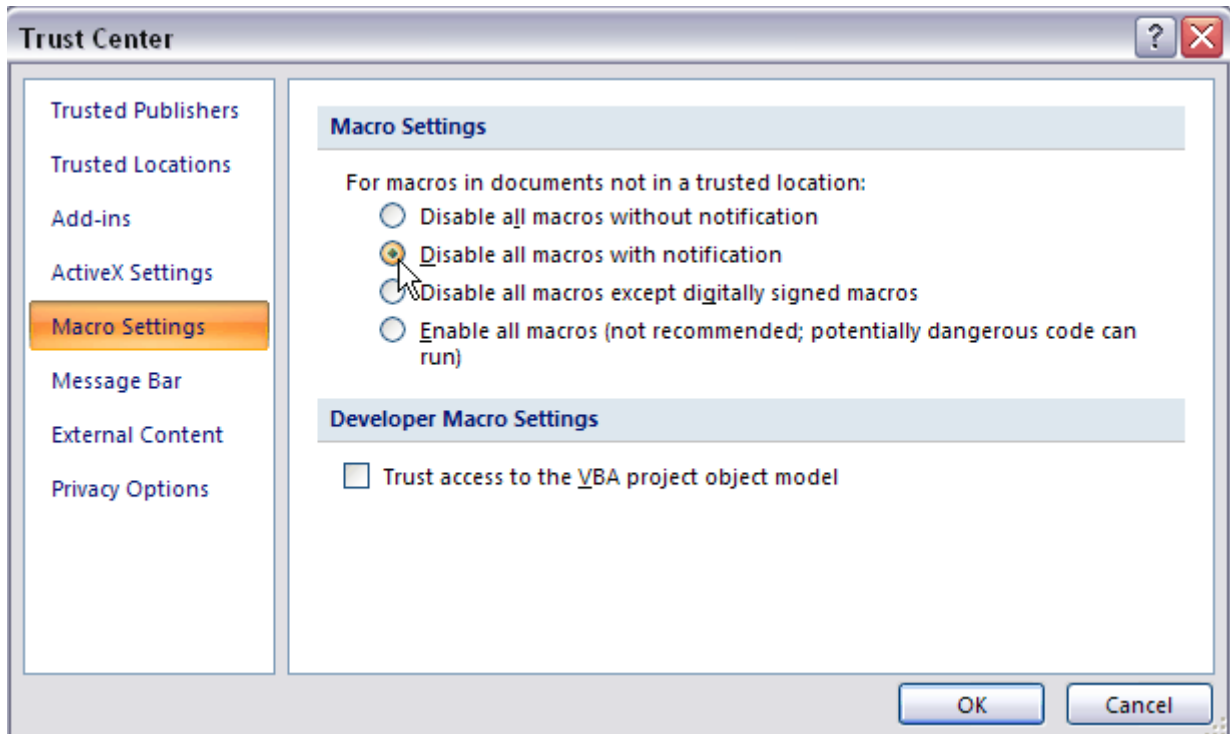

2. Click the **Trust Center** button on the left. Then, at the bottom right, select **Trust Center Settings**.

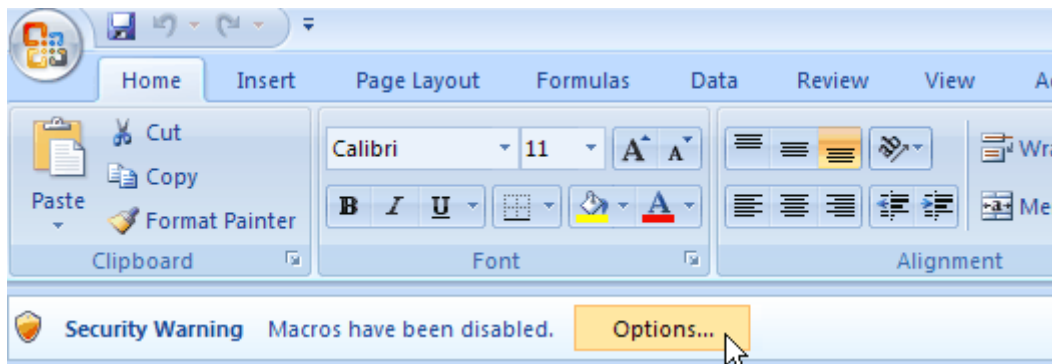

3. In the new window that appears, choose **Macro Settings** from the sidebar and select **Disable all macros with notification** from the list of options that appear. This option keeps macros disabled but notifies users when macros attempt to run, allowing users to decide on a case-by-case basis which macros to enable.

4. Click **OK** to exit this window.

5. For the new settings to take effect, it will be necessary to close Excel and reopen it. A security dialog box should appear beneath the Office ribbon the next time you attempt to run a spreadsheet that contains macros.

6. When the notification appears, click the **Options** button.

7. Choose **Enable this content** from the options that appear to allow macros to run within the current spreadsheet.

8. Click **OK** to close the window.
