

Instructions for RFID Shoe Tags

- On each shoe, feed one lace through the RFID tag so that it rests on the side of the shoe and then tie your shoe back. The tag **MUST** be threaded through a tied lace; otherwise, you will lose the tag and not get an accurate finish time for the race.
- Ideally, you should leave the tag hanging loosely from the shoelace instead of tucking it into the laces (this improves the read rate of the tags).
- If you do not have a shoe with laces, pin the tag to the outermost part of the running shorts. Read rate may lower with this option, so use the shoes if possible.
- Coaches, before you leave the event, collect all shoe tags, put them all in the provided envelope with your team name on it, and return the envelope to the box in the red t-shirt tent in the stadium. There will be a \$5 charge for any lost/ unreturned shoe tags.
